

2011 Hall of Fame Inductee

Dr. Terre Quinn McGlothlin

Class of 1980

Being a trailblazer is not new to U. City grads, and Terry Quinn McGlothlin, M.D., is certainly living up to that reputation in her chosen field of expertise - Breast oncology.

McGlothlin earned a bachelor's degree in biology from Drake University and a doctorate from Meharry Medical College. She completed her internship and residency at the University of Louisville and a fellowship at Baylor University Medical Center.

Class of 1980

During her residency, she received first prize in the Drew-Walker Surgical Resident Forum and the Robert E. Edelen Award. She has received numerous other awards and is well recognized for her expertise in breast oncology.

One of her life's ambitions is to bring greater awareness to women that breast cancer can be treated and cured, but success requires early detection and a woman's active involvement in her own health care.

"Women need to now that care is available for them, and they deserve to be fully informed of all treatment options... that breast cancer can be treated and cured," said Dr. McGlothlin.

She is also an avid tennis and scrabble player.
